

Requirement Document: Global Banking System

Bank Name: CLI Testing Bank

Project Name: Global Banking System

1. Overview

The Global Banking System is a web-based banking application designed for educational and testing purposes. It simulates core banking functionalities such as customer login, account management, deposits, withdrawals, and transaction history. The system is built using AngularJS and is intended to be tested using Protractor.

2. User Roles

- **Customer**
- **Bank Manager**

3. Functional Requirements

3.1 Home Page

- Display two login options:
 - **Customer Login**
 - **Bank Manager Login**
- Navigation between login pages and back to the home page.

3.2 Customer Login

- Select a customer from a dropdown list.
- Upon login, display:
 - **Welcome message with customer name**
 - **Account balance**
 - **Navigation options:**
 - **Transactions**

- **Deposit**
- **Withdraw**
- **Logout**

3.2.1 Deposit Functionality

- Input field for deposit amount.
- Submit button to perform deposit.
- Update account balance upon successful deposit.
- Display confirmation message.

3.2.2 Withdrawal Functionality

- Input field for withdrawal amount.
- Submit button to perform withdrawal.
- Update account balance upon successful withdrawal.
- Display confirmation message.
- Handle insufficient balance scenario.

3.2.3 Transactions Page

- Display a table of all transactions (deposits and withdrawals).
- Each row includes:
 - **Date**
 - **Transaction Type**
 - **Amount**
- Option to reset transaction history.

3.3 Bank Manager Login

- Upon login, display three tabs:
 - **Add Customer**
 - **Open Account**

- **Customers**

3.3.1 Add Customer

- Input fields:
 - **First Name**
 - **Last Name**
 - **Post Code**
- Submit button to add customer.
- Display confirmation message with customer ID.

3.3.2 Open Account

- Select customer from dropdown.
- Select currency (Dollar, Pound, Rupee).
- Submit button to open account.
- Display confirmation message with account number.

3.3.3 Customers Tab

- Display a table of all customers.
- Each row includes:
 - **First Name**
 - **Last Name**
 - **Post Code**
 - **Account Number**
- Option to delete a customer.

4. Non-Functional Requirements

- **Browser Compatibility:** Chrome, Edge, Firefox
- **Performance:** Fast response time for all operations
- **Security:** Basic validation for inputs

- **Usability:** Simple and intuitive UI
- **Testability:** Designed for automated testing using Protractor

5. Technical Stack

- **Frontend:** AngularJS
- **Automation Testing:** Protractor, Selenium WebDriver
- **Language:** Java (for test automation)
- **IDE:** IntelliJ IDEA
- **Operating System:** Windows OS
